Table S1 - Comparison of patients included and not included in the study at 360 days.

Variable		Elegible n=454	Included n=189	Not included n=265	p*
		Mean ± standard deviation			
Age (years)		<mark>57.7 (14.5)</mark>	59.3 (13.4)	56.5 (15.3)	0.051
BMI [§] (kg/m ²)		31.0 (6.8)	31.3 (6.7)	30.6 (6.9)	0.370
Variable	Category	n (%)			p*
Center of study [‡]	Hospital das Clínicas	<mark>74 (16.3)</mark>	36 (19.0)	38 (14.4)	0.369
	Hospital Eduardo de Menezes	209 (46.1)	<mark>82 (43.4)</mark>	127 (48.1)	
	Hospital Júlia Kubistchek	170 (37.5)	<mark>71 (37.6)</mark>	99 (37.5)	
Sex [‡]	Female	233 (51.3)	96 (50.8)	157 (31.7)	<mark>0.849</mark>
	<mark>Male</mark>	221 (48.7)	93 (49.2)	128 (48.3)	
Hospitalization in ICU [‡]	No	200 (44.3)	95 (50.3)	105 (40.1)	0.032
	Yes	<mark>251 (55.7)</mark>	94 (49.7)	157 (59.9)	

[‡] Missing data: ≤ 10%; § missing data: 56% (included n=147, not included n=107, eligible n=254). * ANOVA test to test differences between means and Pearson's Chi-square to test differences between proportions. BMI: body mass index. ICU: intensive care unit.
